

ODUGUWA DAMILOLA JOHN

◇ Lagos, Nigeria

oduguwadamilola40@gmail.com ◇ [LinkedIn](#) ◇ [Personal Website](#)

Software Engineer with 2+years of experience in AI/ML and backend systems.

EXPERIENCE

Machine Learning Engineer
Bluechip Technologies

April 2025 - October 2025
Lagos, Nigeria

- Designed and deployed an event-driven AI-powered cargo scheduling system for LNG and condensates, using FastAPI, MongoDB, and Redis, reducing ETA deviations by over 60% using constraint-based optimization (Google OR-Tools, CP-SAT).
- Contributed to system architecture, event bus design, and CI/CD pipelines to support continuous delivery of backend services in a dynamic logistics environment.
- Modeled real-world constraints (berthing windows, plant shutdowns, planned maintenance) into formal optimization problems, enabling dynamic, ML-informed decision-making.
- Implemented schedule versioning, background task orchestration, and notification systems to ensure operational visibility and responsiveness.

Software Engineering Intern
Stanbic IBTC

April 2025 - October 2025
Lagos, Nigeria

- Built and deployed a **Face Verification service** using Azure Cognitive Services for BVN-based identity verification across internal platforms.
- Developed a lightweight GCM-based encryption API to help middleware developers securely encrypt and decrypt requests during local development and testing.
- Wrote and maintained documentation for nearly all backend microservices, improving internal knowledge sharing and reducing developer onboarding time.
- Authored release notes and changelogs for senior engineers to ensure clarity and continuity during service deployments.

Machine Learning Engineer
AIplier

September 2024 - Jan 2025
Louisiana, USA

- Designed an LLM-based web automation agent using Playwright and Langgraph.
- Designed and implemented systems to visually annotate web elements using bounding boxes, facilitating navigation for an LLM.
- Developed scripts to parse interactive elements from the DOM and organize them into a DOM tree structure for use with an LLM.
- Implemented FastAPI endpoints for interacting with other backend microservices.
- Implemented continuous integration and development practices.

EDUCATION

Bsc. Computer Engineering, University of Lagos

2020 - 2026

- **Second Runner-up at the ARB Academic Board Engineering Quiz Competition.**

SKILLS

-
- **Languages:** Python, C#
 - **Frameworks:** FastAPI, ASP.NET, PyTorch

- **Tools:** Docker, Git, LangGraph, OR-Tools, Playwright

PROJECTS

SabiYarn. Pretrained a language model from scratch on the major Nigerian Languages.

- Implemented loss masking strategies to optimize compute efficiency during pretraining.
- Wrote distributed training code for pretraining on multi-GPU infrastructure.
- Designed and tested alternate architectures including differential attention, cut-cross entropy, and multi-token prediction to evaluate impact on pretraining performance.

Zeno A Natural Language based books recommendation engine for discovering books based on Natural Language text descriptions. [Try it out here](#)

Whatsol A Solana-wallet backend for sending and receiving SOLs from WhatsApp contacts. [Try it out here](#)

AIpplier An LLM-based web automation agent for automating job applications on popular job boards
